Section 1 - Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

Kewaunee Scientific Corporation shares the concerns of Congress and the international business community that profits from the mining of certain minerals (“3TGs,” as defined below) in the Democratic Republic of Congo or its adjoining countries may be aiding human rights abuses. The term “3TGs” refers to columbite-tantalite (coltan), cassiterite, gold, wolframite or their derivatives, which are limited to tantalum, tin and tungsten.

With respect to the calendar year ended December 31, 2024, we identified several of our products for which 3TGs (as defined above) may be present in and necessary to their functionality or production. Accordingly, we have developed a conflict minerals procedure, as described below, reasonably designed to identify whether the 3TGs in the Covered Products, if any, originated in the Democratic Republic of Congo or an adjoining country (the Republic of the Congo, the Central African Republic, South Sudan, Uganda, Rwanda, Burundi, Tanzania, Zambia or Angola) (the “Covered Countries”), or whether any of the 3TGs in the Covered Countries are from recycled or scrap sources.

On an annual basis, our product development team reviews a list of our significant vendors and identifies any vendors for which the materials we purchase may contain 3TGs. Through this process, we determined that several of our products may contain small traces of one or more 3TGs. As a result, we have established a process whereby we conduct a country-of-origin inquiry reasonably designed to determine whether 3TGs contained in or used to produce these products, if any, originated in a Covered Country or were from recycled or scrap sources.

Description of the Company’s Reasonable Country of Origin Inquiry

To determine the origin of any 3TGs, a survey was sent to all of our identified suppliers whose products may contain them. The survey inquired about the origin of their 3TGs and whether they had a written policy for conflict-free sourcing of 3TGs, among other items. Except as described below, responses received from the survey indicated that any 3TGs in materials provided by our suppliers did not originate from the Covered Countries. In addition to the responses received from our suppliers, management has no reason to believe that any 3TGs in or used in the production of our Covered Products may have originated in the Covered Countries.

In response to our survey, one supplier identified one potential smelter located in a Covered Country. We have determined that this potential smelter is listed as “Conformant” for having successfully completed an assessment against the applicable Responsible Minerals Initiative Responsible Minerals Assurance Process assessment standard. Our inquiry regarding the origin or source of 3TG contained in our products did not provide sufficient information to conclusively determine the country of origin of 3TG contained in our products that we obtain from this supplier or whether such 3TG came from recycled or scrap sources, or whether the 3TG benefited or financed armed groups, and we cannot ascertain if a Covered Country source was in fact used for the 3TG contained in any of our products containing 3TGs from this supplier.

If at any time we discover the use of any 3TGs originating from the Covered Countries, we will take appropriate measures to discontinue use of such materials or processes.

This information is also available on our website at www.kewaunee.com, as well as the SEC’s EDGAR database at www.sec.gov.

Signature

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this disclosure to be signed on its behalf by the undersigned hereunto duly authorized.
